

Table of Contents

- [400.00 SYSTEM](#)
- [400.01 Definition: System](#)
 - [400.20 Comprehensibility of Systems](#)
 - [400.30 Tiger's Skin](#)
 - [400.40 Finiteness of Systems](#)
 - [400.50 Other Characteristics of Systems](#)
 - [400.53 Interconnection of Systems](#)
 - [400.55 Polyhedra](#)
 - [400.60 Motion of Systems](#)
- [400.65 Summary: Six Positive and Negative Motions](#)
 - [400.651 Energetic Functions](#)
 - [400.653 Structural Functions](#)
 - [400.654 Summary](#)
- [400.66 Basic Motions and Degrees of Freedom](#)
- [400.70 Visibility and Invisibility of Systems](#)
- [401.00 Twelve Vectors of Restraint, Six Positive and Six Negative, Define Minimum System](#)
 - [401.02 Tetherball](#)
- [402.00 Tetrahedron as System](#)
- [403.00 Stable and Unstable Systems](#)
 - [403.02 Conceptuality](#)
 - [403.03 Generalized Principles](#)

- [410.00 Closest Packing of Spheres](#)
 - [410.01 Nature's Coordination](#)
 - [410.10 Omnitriangulation of Sixty Degrees](#)
 - [411.00 Four Spheres as Minimum System](#)
 - [411.10 Unpredicted Degrees of Freedom](#)
 - [411.20 Discovery as a Function of Loss](#)
 - [411.30 Intergearred Mobility Freedoms](#)
 - [412.00 Closest Packing of Rods](#)
 - [412.02 Surface Tension Capability](#)
 - [413.00 Omnidirectional Closest Packing](#)
 - [414.00 Nucleus](#)
 - [415.00 Concentric Shell Growth Rates](#)
 - [415.01 Minimal Most Primitive Concentric Shell Growth Rates of Equiradius, Closest-Packed, Symmetrical Nucleated Structures](#)
 - [415.02 Odd or Even Shell Growth](#)
 - [415.03 Even Number Shell Growth](#)
 - [415.10 Yin-Yang As Two \(Note to Chart 415.03\)](#)
 - [415.17 Nucleated Cube: The "External" Octahedron](#)
 - [415.20 Organics](#)
 - [415.30 Eight New Nuclei at Fifth Frequency of Vector Equilibrium](#)
 - [415.40 Begetted Eightness](#)
 - [415.50 Vector-Equilibrium Closest-Packing Configurations](#)
 - [415.55 Nucleus and Nestable Configurations in Tetrahedra](#)
 - [415.58 Basic Nestable Configurations](#)
 - [416.00 Tetrahedral Precession of Closest-Packed Spheres](#)
 - [417.00 Precession of Two Sets of 60 Closest-packed Spheres](#)
 - [418.00 Analogy of Closest Packing, Periodic Table, and Atomic Structure](#)
 - [419.00 Super-Atomics](#)
 - [419.10 Nuclear Domain and Elementality](#)
 - [419.20 Elemental Identification of First and Second Shell Layers](#)
 - [419.23 Table: Number of Protons and Neutrons in Magnesium, Molybdenum, and Uranium](#)
 - [419.30 Closest-sphere-packing Analogy to Atomic Structure](#)
- [420.00 Isotropic Vector Matrix](#)

- [420.04 Equilibrium](#)
- [421.00 Function of Nucleus in Isotropic Vector Matrix](#)
 - [421.031 Function of Nucleus in the Isotropic Vector Matrix](#)
 - [421.10 Corollary](#)
- [421.20 Ideal Vectorial Geometry of Nucleated Systems](#)
- [422.00 Octet Truss](#)
 - [422.10 Force Distribution](#)
 - [422.20 Geometry of Structure](#)
- [423.00 60-Degree Coordination](#)
 - [423.10 Hexagon as Average of Angular Stabilizations](#)
- [424.00 Transformation by Complementary Symmetry](#)
- [425.00 Potentially of Vector Equilibrium](#)
- [426.00 Spherics](#)
 - [426.04 Spherics](#)
 - [426.10 Definition of a spheric](#)
 - [426.20 Allspace Filling](#)
 - [426.30 Spherics and Modularity](#)
 - [426.40 Radiant Valvability of Isotropic-Vector-Matrix-Defined Wavelength](#)
- [427.00 Nuclear Computer Design](#)
 - [427.10 Invisible Circuitry of Nature](#)
- [430.00 Vector Equilibrium](#)
 - [430.01 Definition](#)
 - [431.00 Volume](#)
 - [432.00 Powering](#)
 - [433.00 Outside Layer of Vector Equilibrium](#)
- [440.00 Vector Equilibrium as Zero Model](#)
 - [440.09 Zerophase](#)
 - [441.00 Vector Equilibrium as Zero Tetrahedron](#)
 - [441.01 Emptiness at the Center](#)
 - [441.021 Zerovolume Tetrahedron](#)
 - [441.03 Terminal Condition](#)
 - [441.10 Coordinate Symmetry](#)
 - [441.20 Turbining](#)
 - [442.00 Polarization of Vector Equilibrium](#)

- [443.00 Vector Equilibrium as Equanimity Model](#)
- [445.00 Frequency of Vector Equilibrium](#)
- [450.00 Great Circles of the Vector Equilibrium and Icosahedron](#)
 - [450.10 Great circles of the Vector Equilibrium](#)
 - [450.11 Four Sets of Axes of Spin](#)
 - [451.00 Vector Equilibrium: Axes of Symmetry and Points of Tangency in Closest Packing of Spheres](#)
 - [452.00 Vector Equilibrium: Great-Circle Railroad Tracks of Energy](#)
 - [453.00 Vector Equilibrium: Basic Equilibrium LCD Triangle](#)
 - [453.02 Inside-Outing of Triangle](#)
 - [454.00 Vector Equilibrium: Spherical Polyhedra Described by Great Circles](#)
 - [455.00 Great-Circle Foldabilities of Vector Equilibrium](#)
 - [455.01 Foldability of Vector Equilibrium Four Great-Circle Bow Ties](#)
 - [455.10 Foldability of Vector Equilibrium Six Great-Circle Bow Ties](#)
 - [455.20 Foldability of 12 Great Circles into Vector Equilibrium](#)
 - [456.00 Transformation of Vector Equilibrium into Icosahedron](#)
 - [456.10 Icosahedron as Contraction of Vector Equilibrium](#)
 - [456.20 Single-Layer Contraction](#)
 - [457.00 Great Circles of Icosahedron](#)
 - [457.01 Three Sets of Axes of Spin](#)
 - [457.20 Six Great Circles of Icosahedron](#)
 - [457.30 Axes of Symmetry of Icosahedron](#)
 - [457.40 Spherical Polyhedra in Icosahedral System](#)
 - [460.00 Jitterbug: Symmetrical Contraction of Vector Equilibrium](#)
 - [460.01 Definition](#)
 - [461.00 Recapitulation: Polyhedral Progression in Jitterbug](#)
 - [461.02 Icosahedron](#)
 - [461.07 Octahedron](#)
 - [461.08 Tetrahedron](#)
 - [461.10 Deceptiveness of Topology: Quanta Loss by Congruence](#)
 - [462.00 Rotation of Triangle in Cube](#)
 - [463.00 Diagonal of Cube as Wave-Propagation Model](#)
 - [464.00 Triangle in Cube as Energetic Model](#)
 - [465.00 Rotation of Four Axes of Vector Equilibrium: Triangles, Wheels,](#)

and Cams

- [465.10 Wheels: Rubber Tires](#)
- [465.20 Torus](#)
- [465.30 Four-Dimensional Modility](#)
- [465.40 Triangular-cammed, In-out-and-around Jitterbug Model](#)
- [466.00 Energy-valve Functioning of Outer Shell of Nuclear Domains](#)
- [466.10 High-frequency Sphericity Approaches Flatness](#)
- [466.20 Centrifugal Forces](#)
- [466.30 Nuclear Tetrahedra Pairs: Closest-sphere-packing Functions](#)
- [466.40 Universal Section of Compound Molecular Matrix](#)
- [470.00 Allspace-Filling Transformations of Vector Equilibrium](#)
- [480.00 Tetrahedron Discovers Itself and Universe](#)
